Idea: A tribute website to my Mother-in-Law (Abuelita)

My mother-in-law just passed away. She was much loved by her very large family. I have so many family pictures here on my desk that I thought I would do a little tribute site to her, and the family.

Wireframes:

I used the Pencil app for my wireframes.

Site operation:

The site would consist of a picture of Abuelita on top, with a tree structure below showing smaller pictures of her children and grandchildren. Users can click on buttons to show various levels of the tree (i.e. click here to show all grandchildren). They can also click on a child or grandchild to see all of their descendents in the tree. Jquery classes will be used to hide/show pictures as needed.
